

Abstract

There is provided a monocycle provided with a handle portion, enabling to apply brake and enabling to carry out a variety of play capable of dealing with jumping or the like by providing a suspension at a wheel. The monocycle 1 is provided with a wheel 3 constituted by a rim 32 of a predetermined diameter having a tire 31, an axle 33 arranged at a center portion of the rim 32, and a connecting piece 34 for connecting the rim 32 and the axle 33, pedals 5, 5 capable of driving to rotate the axle 33 of the wheel 3, a frame portion 7 pivotably fixed with the axle 33 at one end side thereof, a handle portion 9 connected to a base portion 72 of the frame portion 7, and a saddle portion 11 connected to the base portion 72 of the frame portion 7. The handle portion 9 is slidably and fixably provided at the base portion 72 of the frame portion 7. The handle portion 9 and a saddle 113 of the saddle portion 11 are arranged at a predetermined angle therebetween. The connecting piece 34 is arranged with at least 3 pieces of suspensions at intervals of 120 degrees between the rim 32 and the axle 33. Brake means 13 capable of manually braking the wheel 3 is provided.
